Dear Friends,

Negotiations on a new climate agreement are set to take place in Paris next year. We activists from EKiB believe that neither this nor any other talks are likely to stop climate change. Remember, the 19th UNO Climate Change Conference in 2013 was held in a year when worldwide CO₂ emissions were higher than ever! All international climate conferences held in recent years have produced nothing but hot air, and in Germany, the supposed climate protection leader, Merkel's government is supporting the large scale electricity generation powered by brown coal.

Profits are the only thing the ruling class thinks of. We think of CO₂ reduction and believe peoples power is the only way to do it. Instead of just focusing on the 2015 Climate Change Conference in Paris, we aim to use next year for large scale demonstrations of civil disobedience directed against locations responsible for climate change. During our 2014 "Kohleausstieg ist Handarbeit" campaign we gained valuable experience, both at the Climate Games in Amsterdam and in machinery occupations and diverse blockades at brown coal mining strips in the Rhineland.

Our goal is to plan and prepare the 2015 campaign with as many people and groups as possible, therefore would like to invite you to a plenary meeting in Cologne from 3-5 October.

Climate change has many sources, but even more consequences. It is fuelled by coal and oil mining, CCS and fracking, road transport, air traffic, industrial food production and many other factors. The current manner in which power and energy are produced harms animals, ecosystems and people, here in Europe but primarily in the global south. Land grabbing, wars fought over raw material and water supplies and the ensuing displacement of people, as well as the growing number of extreme weather occurrences, even fuel poverty, are just the tip of the iceberg. All these topics should have a place in the campaign, hence why explicit groups and individuals not normally associated with the climate struggle are invited too.

Our "Kohleausstieg ist Handarbeit" campaign initiated us with transnational networks. Our desire to build and expand on these is a particular reason why we wish to invite groups not based in Germany to Cologne and join in. Translations will be provided.

For us, resistance and the creation of genuine alternatives are the way we can avoid climate disaster. Therefore we send our warmest invitation to supporters of "Buen Vivir" in Latin America, the "Degrowth" movement in the global north and the "Alternatiba" initiative currently gaining momentum in France.

**Climate protection is handwork! Cologne 3 - 5 Oct!**

Further information at: [http://ekib.blogspot.eu/](http://ekib.blogspot.eu/)
Please pass this invitation to groups and individuals who might be interested in attending this meeting. Meals, simple accommodation and translation will be organised. For planning purposes we kindly request you notify us of your participation by mid September by mail to info@ausgeco2hlt.de.

* (literal translation) "coal phase out is handwork"
